

APPLICATION TECHNICAL DATA

A. ADVANCED RESERVATION OF TRANSMISSION CAPACITY DATA

1. Desired starting date of Transportation Services: First half 2024

2. Desired end date of Transportation Services: Second half 2055

4. Advanced Reservation of Capacity for reception in Exit Points:

No	Name of Exit Point	Reserved Transportation Capacity [MWh/Day]	Maximum Hourly Quantity [MWh/hour]	Maximum Pressure [barg]	Minimum Pressure [barg]
1	Thisvi (New point)	25 920	1 080	65	25

B. INFORMATION FOR THE OFF-TAKE INSTALLATION OR THE USER'S CONNECTED SYSTEM AND ESTIMATED ANNUAL GAS QUANTITY

Brief Technical Description

The Application for the Advanced Reservation of Capacity concerns the receipt of natural gas from the company ELVALHALCOR S.A, in a property owned by the company, in the Industrial Area of Thisvi, in order to supply a new, high efficiency combined cycle power plant (CCPP).

This power plant is planned to be supplied with natural gas, through a pipeline connected to the National Natural Gas Transmission System (NNGTS). For this reason, it is necessary NNGTS to be extended creating a new exit point in the area of Thisvi, near the power plan.

Commencement of operation of the power plant is estimated within 2024, while the end date of the provision of Transmission Services is estimated in 2055. Capacity booking by the Applicant will amount to 25 920 MWh/day, and it will be constant throughout the period of Transmission Services provision.
